E-volution 660

ELEGANCE, COMFORT AND
SPORTINESS IN PERFECT
HARMONY

A real yacht indeed!
With its stability and explosive performance, the E-volution 660 is a boat of pleasant surprises, available in both tour and sport versions. The first Stickl-boat, in which we combined the modern electro-boat hull shape with the comfort and wave protection of a motorboat.

This required a wealth of innovative ideas and development brains, and the success has not been lacking. Today, nearly 200 E-volution 660 are riding the waves at home and abroad!

The cherry on the cake is that, despite their size, the E-volution 660 models can be driven without a licence.

WHAT MAKES E-VOLUTION 660 SPECIAL?

DEVELOPED FOR ELECTRIC BOATING

The flat bottom shape and the battery centre of gravity positioned below the waterline ensure safety from the moment you step on board. The boat doesn't rock and is easy to manoeuvre, so you can dock in crowded Balaton marinas with confidence. It's really handy, which makes it the perfect choice for beginner yachtsmen with no experience.

EXPERIENCE THE EASE!

Just push the accelerator forward and feel the boat glide right over! Thanks to the electric drive, you can reach the other shore in no time, or you can pull a water skate or tube for the kids' delight!

CRUISE WITH NO STRINGS ATTACHED!

The ultra-low drag design allows a range of up to 60-100 km (depending on the battery pack), which can easily be extended with a quick charge during a short marina visit.

Flat bottom, planing hull - The new generation of electric boating!

The lightweight, low drag planing hull offers energy savings of up to 50% compared to conventional motor boats, depending on speed. It allows the boat to be easily glided while still achieving an exceptionally high cruising range.

INNOVATIVE SOLUTIONS

Passenger capacity for 8 people.

The elegant retro-design deck is built on a high-tech planing body.

The sharp bow slashes through the water like a knife, its steep shape elongating the waterline, so the boat can ride the waves.

The flat stern design provides extreme stability and the possibility to glide even with motor power as low as 15 kW.

1. Comfortable captain's bucket seat, from where you can easily overlook the whole boat.
2. Comfortable and safe access to the foredeck.
3. The storage spaces under the long side benches are deep and easy to pack.
4. Even a large group of friends can picnic comfortably in the space-efficient cockpit.
5. The cockpit can be converted into an outdoor double berth in no time.

CLEVER DECK DEVELOPED FOR ELECTRIC BOATING

The sophisticated elegance is complemented by a rich list of standard equipment.

Standard features include a large bimini, a maintenance-free wood effect decking and premium upholstery.

1. Dip your feet in the water, or sunbathe comfortably near the water on the bathing platform.
2. The exceptionally long bathing ladder makes it easy to get out for young and old alike. The ladder is elegantly concealed in the hull with a secure locking mechanism.
3. The large, foldable bimini is made of special fabric and measures 2 m in length, providing pleasant shade even at the hottest hours of the day.

Under both benches there is a deep storage compartment that is easy to pack.

Even a group of 7 can picnic comfortably in the cockpit.

Built-in sink and 30 l freezer compartment.

The wide steps give you safe access to the foredeck.

1.5 sqm bathing platform, 3-position roll-bar, 6 cup holders.

The cushions on the foredeck are covered in premium water and moisture resistant upholstery, and there's a separate storage compartment for your mobile phone.

Can also be fitted with an electric remote-controlled anchor winch.

STRONG, SILENT, MAINTENANCE-FREE ELECTRIC MOTOR

GIVE THE LITHIUM IONS A GO!

Pump the accelerator forward and dazzle your passengers! The electric motor's special feature is that it delivers torque without delay and flies the lightweight hull through even the wildest waves!

HOW WILL IT FEEL?

You'll feel the adrenaline rush of limitless gliding pulsing through your veins as you not only see the sunlit landscape, but hear the sounds of nature: the lapping of water, the laughter of girls, the soft cries of seagulls. One thing you can be sure of during your e-boating experience: the motor noise is guaranteed not to disturb your relaxation.

Underwater electric motors are available with power outputs from 4.3 to 19 kW. Thanks to the impressive torque, even the smallest motor provides a thrilling lake cruise, and with the high-performance motor-battery combination, the E-evolution 660 glides like a speedboat.

Our 12 years of experience in yacht building and 10 years in exports, as well as the feedback of 250 satisfied customers, prove to us that our developments have resulted in safe peak performance and, over and over again, an impressive efficiency.

HIGH-TECH LITHIUM BATTERY SYSTEMS

Plug the cable into a standard 230 V socket and you can just leave your boat in the marina! Enjoy the sunshine, the exhilarating summer moments, because as well as being so easy to charge, the battery power is impressively efficient!

LI-ION BATTERIES

The necessary amount of energy is therefore provided by fully sealed, high-end lithium batteries designed for industrial use, which are several times more durable than those used in the automotive industry, have a long service life. For each Stickl model, we provide a battery charger specially programmed for the battery, which maintains the batteries continuously, winter or summer.*

QUICK CHARGING

Whilst the sun is shining and the sky is blue, the charging speed is always a key issue. One of the outstanding advantages of the lithium battery system is its rapid re-chargability, which can be optimised with a programmable fast charger suited to the needs of the owner and local conditions.

MONITORING SYSTEM

The boat is equipped with a professional monitoring system to guarantee long battery life and safety. The GSM remote monitoring system is also built to fit your boat, so you can keep your e-boat safe wherever you go.

* Assuming that pleasure boats are operated at 0-50 degrees Celsius outside temperatures.

LUXURY EVEN IN THE CABIN

1. The comfort of the cabin, which sleeps up to 3 people, is ensured by a double bed, a 24" TV, reading lamps, under-bed storage compartments, practical shelves and soft wall covering.
2. The self-closing sliding door glides elegantly and closes smoothly. There is also a comfortable space for changing.
3. The cabin is well ventilated through openable windows with mosquito nets and can even be fitted with a hidden chemical toilet.

SPECIFICATIONS

Overall length:	6,70 m
Waterline length:	6,17 m
Maximum beam:	2,10 m
Waterline beam:	1,87 m
Depth:	1,25 m
Maximum draft:	0,40/0,65 m
Kerb weight:	1.200 kg<
Motor power:	4,3 – 19 kW (underwater motor)
Passenger capacity:	8
CE-class:	C (wave height up to 2 metres)

CUSTOMISED ACCESSORIES ADAPTED FOR ELECTRIC BOATING

*Go extra!
Choose unique, logo branded
accessories for your Stickl boat,
developed on the basis of customer
feedback to create an atmosphere of
comfort and elegance for you and your
guests on board.*

1. Elegant sink hidden in the staircase. The 20 l removable fresh water tank can be easily filled at the marina.
2. An exclusive bar cabinet with engraved glasses to offer your friends a refreshing moment at the lake.
3. An easy-to-use 30-litre cooler, in which you can store your wines upright too.
4. GPS navigation and depth sounder for safe lake route planning.
5. The foredeck offers double sunbathing space for sun lovers.
6. Teak table that can be transformed into a double berth in no time.
7. The recessed shower is ready for use in a flash.
